EXPLANATION

- W_Q** = Quarry waste
Waste pile: mounded deposit of waste from quarry operations.
- A** = Alluvium
Material underlies narrow to broad, flat-surfaced floodplains of perennial streams. Comprises stratified sand, silt, and clay in upper part; same plus gravel in lower part. Generally less than 10 feet thick.
- C** = Colluvium
Colluvium is unsorted and unstratified to crudely stratified debris derived from underlying bedrock. Comprises fragments set in finer-grained matrix. Play fragments in schist bedrock areas (RC); more equant fragments in gneiss and serpentinite bedrock areas (RC₂ and RC₃). Mapped where greater than 6 feet thick.
- AC** = Alluvium and colluvium undivided
Alluvium and colluvium are mapped together where the valley in which they occur is too narrow to map the units separately at 1:24,000 scale.
- RC** = Schist bedrock and colluvium undivided
Surfaces with low to steep slopes underlain by unweathered or weathered schist bedrock and thin (<6 feet), discontinuous deposits of colluvium.
- RC₂** = Serpentinite bedrock and colluvium undivided
Surfaces with low to steep slopes underlain by unweathered or weathered serpentinite bedrock and thin (<6 feet), discontinuous deposits of colluvium.
- S** = Saprolite
Upland surface underlain by isovolumetrically weathered, untransported bedrock that retains its original character but has lost up to half its original bulk density.
- RU** = Rock upland
Nearly flat upland surface underlain usually by weathered schist bedrock, sometimes by unweathered schist bedrock. Little or no colluvium is present.
- R** = Rock
Surfaces with steep to very steep slopes underlain by unweathered or weathered rock that is at or very close to the surface. Some colluvium may occur at the base of the slope.
- = Outcrop
Areas with continuous or discontinuous bedrock outcrop.

Mapped, edited, and published by the Geological Survey
Control by USGS and NOS/NOAA
Culture and drainage in part compiled from aerial photographs taken 1952. Topography by plane-table surveys 1939 and 1940. Revised 1953.
Polyconic projection. 10,000-foot grid ticks based on Maryland coordinate system, and Pennsylvania coordinate system, south zone 1000-meter Universal Transverse Mercator grid ticks, zone 18, shown in blue.
1927 North American Datum
To place on the predicted North American Datum 1983 move the projection lines 7 meters south and 29 meters west as shown by dashed corner ticks.
Revisions shown in purple and woodland compiled from aerial photographs taken 1982 and other sources. This information not field checked. Map edited 1985.

CONTOUR INTERVAL 20 FEET
NATIONAL GEODETIC VERTICAL DATUM OF 1929
