

COLUMNAR SECTIONS OF THE COAL MEASURES IN THE VICINITY OF ASHLAND AND CENTRALIA, SCHUYLKILL AND COLUMBIA COUNTIES. OBTAINED FROM THE COMPANIES NAMED IN THE INDIVIDUAL TITLES AND FROM THOSE MADE BY THE GEOLOGICAL SURVEY. Scale: 40 feet to 1 inch.

NOTES:
 1. The strata composing some of these sections have been named locally and consequently a similarity of name does not necessarily indicate a similarity in the character of the strata and vice versa.
 2. Sections Nos. 1, 3, 5, 8, and 9 were measured by the Geological Survey and to them No. 11 does not apply.
 3. Section No. 2 was constructed from the records of Mr. J. B. Stricker, Engineer-in-Chief, Mine Section No. 2, and from the records of Mr. J. M. Riley, Engineer, Lehigh Valley Coal and Iron Company, Section No. 10 from the records of Mr. E. C. Clemens, Engineer, Lehigh Valley Coal Company, and Section No. 12, 13, 14 and 15 from the records of the Philadelphia and Reading Coal and Iron Company.
 4. The thicknesses shown in the individual strata are the true thicknesses perpendicular to the bedding. The thickness of the coal beds are shown as cut in the bore hole, shaft or tunnel which the section represents and do not necessarily show the average thickness of the beds where worked at other points.
 5. The thicknesses of the strata cut in the bore holes, shafts and tunnels from which the thicknesses shown in these sections have been determined can be found in the Annual Report of the Geological Survey for 1886, Part III.
